

## APPSEC AS A SERVICE OVERVIEW

Your AppSec solutions require significant bandwidth and the **right skills** to manage properly.

We can utilize your tools and integrate them with our organization's posture management platform to ensure optimal program health.

Our AppSec service scales up or down based on your unique requirements.

"Most companies need application security as a service, because they don't have a staff of experts and they can't do it with their internal staff."

—Jeff Williams, Contrast Security CTO

## Finding qualified application security professionals is no easy task.

With our AppSec as a Service offering, we enable you to effectively launch your application security program and evolve and mature your program over time. Now you can:

- Achieve dramatic cost savings vs. hiring in-house AppSec specialists
- Fluid Approach with built-in SLAs for client requests
- Gain in-depth analysis related to the security of your critical applications
- Seamlessly extend your team with our posture management platform
- Enjoy a white-glove service approach that is tailored to meet your unique needs and SLAs
- Expand testing coverage across your application portfolio
- Help you meet application security testing compliance or audit requirements

Our team of experts can manage your AppSec program with Command Center ASPM to help you implement best practices, minimize your workload, and maximize your productivity.

- ✓ Optimize and automate your environment to deliver a scalable and effective testing approach
- ✓ Perform software upgrades, troubleshooting, and onboarding of new applications
- ✓ Perform comprehensive and consistent testing of applications
- ✓ Validate findings and work with development teams and provide remediation recommendations
- ✓ Ensure multiple rounds of testing for in-scope applications
- ✓ Integrate with ticketing, monitoring, and incident response platforms

- **Reduce friction** and optimize operational overhead by integrating and automating security tooling directly into your CI/CD pipeline or Secure SDLC.
- **Build integrations** with source code management, IDE, and other IT systems, including ticketing, logging, monitoring, incident management, or GRC platforms.

### Implement AppSec Best Practices with Command Center
